

Australian Gold Laser SprayTans

Preparation, SprayTans Tanning and After Tanning Care Information

SprayTans Tan:

An Australian Gold Laser SprayTans application will NOT prevent your skin from burning when exposing your skin to ultraviolet light.

For best results, it may take up to three sessions to develop your desired color.

Maintaining your color is possible with subsequent visits of every five-seven days.

The length of time your tan will last depends on your skin type, the moisturizers and the frequency you tan. Healthy, hydrated skin will maintain results longer and achieve color faster.

Preparation:

Exfoliants used prior to tanning will increase the effectiveness of the tanning.

Moisturizers must not be applied in the eight hours prior to your treatment.

You should not use the system if you are allergic to the ingredients, a patch test will determine this if you are unsure.

To Prolong the Length of the Tan, Do the Following:

Allow the initial application of the tan to remain on the skin for at least six-eight hours but ideally for twenty-four hours or overnight. This will allow your Australian Gold Laser SprayTan to fully develop and will ensure the longest lasting results.

Avoid being sprayed directly into the armpits - some people have odor reactions in this area.

Clients should have clean, dry exfoliated skin before being sprayed - no makeup, moisturizers and moisturizing body wash.

Pat dry after shaving.

Use a sharp, clean razor when shaving.

Use Australian Gold Forever After daily after shower.

To Prolong the Length of the Tan, Avoid the Following:

Acne products.

Alpha hydroxy acids, citric and tartaric acids.

Anti-aging products.

Beta hydroxy acids and salicylic acids.

Body hair bleach products.

Curel lotion.

Deodorant soaps.

Depilatory hair removal products.

Dove soap and Dove shower gel.

Facial masks and exfoliating scrubs.

Makeup remover.

Prolonged exposure to chlorinated pool or salt water.

Retin-A type products.

Toners containing alcohol or witch hazel.

Underarm deodorant and anti-perspirant.

Use of a loofah, scrub mitt etc. for daily washing.

Wax hair remover.

A woman's tan may also develop differently during various hormonal changes.
